

2021 JET SKI PORT FAMILY

2021 EZ DOCK Jet Ski Port Family

For the 2021 season we are pleased to announce a new range of ports that will make providing your customer the correct port a simple and easy process.

We have ports that cater for the smallest stand-up skis all the way up to the biggest fishing and wake skis as well as in board jet drive boats.

All our ports are FOAM FREE, they all use our patented internal pylon design meaning that they have flotation pockets built in that also aid stability and still have our standard 8 year manufacturing warranty.

THE NEW VXP

Introduced last year as the budget friendly entry point for EZ Dock ports, it was aimed firmly at the smaller lighter skis on the market the Sea doo Trixx and the Yamaha VX series.

However from feed back that you gave us we have further improved the design and flotation capability to be far more versatile and increase the range of skis that it will fit as well as making practical improvements to the design of the roller channels and the port entry.

The flotation increase means it is now as capable as the old MAX integrated bow port but available at a lower RRP, testing with skis up to 315kg (dry weight) has proved successful as shown in the pictures below using a Yamaha Cruiser HO carrying two people and fuel, this is a real game changer.

The port now stays cleaner as the revised roller channels stop water build up and the ski sits higher than before. The lowest break over now means novice ski owners can drive on confidently.

Length 3.8m

Width 1.5m

Flotation 625kg (class of ski that can be carried)

Rec light and Recreation.

KEY FEATURES:

- 70kg more flotation - carry a bigger ski
- New roller channels - safer deck to walk on
- Better drainage and easier to keep clean - water will drain rapidly to reduce algae build up
- New bow entry - smoother entry and reduced impact - low break over
- NO FOAM

THE MAX 2i

The industry leader, the most popular and imitated port on the market and what your customers buy year after year.

This model goes forward for 2021 unchanged in terms of lay out and design.

Simply the best choice for the widest variety of ski in terms of length and weight carrying, with a length of 4.3m, the SeaDoo Wake Pro and Fish Pro fit with ease

Our adjustable width roller accommodates all hull shapes and the rubber bushed axles prevent damage to the port unlike our competition.

Length 4.3m

Width 1.5m

Flotation 771kg (class of ski that can be carried)

All including performance and tow sport/ fishing.

KEY FEATURES:

- The market leader
- Accommodates the longest skis on the market
- Capacity of 771KG
- Auto adjusting roller design
- NO FOAM

THE 280 PORT

**Bigger than any existing ski on the market!
This is a new direction for EZ Dock and
looks to increase carrying capacity by
adding width to give more room to walk on
the dock when the ski is on board.**

This is especially useful when loading to go out or for cleaning down or putting the cover on where a standard 1.5m wide dock isn't quite enough.

This port combines the roller style of the new VXP with a layout similar to the Max 2i. So you get ideal roller placement but with a shorter stiffer axle that won't bend under extreme loading meaning that roller stay in perfect condition as they can get stuck in the roller pocket. You still have the same 4" of sideways adjustment as you do on the Max 2i so nothing has been compromised when it comes to fitting different hulls.

This is the ideal port for families that want a single platform solution without having to add extra pontoon sections and for people that have jet drive boats that want somewhere safe and secure and dry to port them, this extends the customers that you can sell too!

Length 4m

Width 2m

Flotation 900kg (class of ski that can be carried)

All including performance and tow sport/fishing and jet boats.

KEY FEATURES:

- Maximum flotation minimum length
- Increased walking area to accommodate the widest Skis
- New stiffer roller axle for heavier craft
- New drainage channels that don't retain water
- Smoother break over for easy drive on and off
- NO FOAM
